---

## EDUCATION

**B.Eng in Computer Engineering** (Major: Software Engineering), Toronto Metropolitan University **April 2027**

**Relevant Coursework:** Software Design & Architecture; Requirements Analysis & Project Management; Database Systems; Operating Systems; Algorithms & Data Structures; Engineering Economics & Ethics

## TECHNICAL SKILLS

**AI & Automation:** OpenAI APIs, LangChain, RAG, prompt engineering, LLM workflows, Zapier

**Systems & Data:** Python, SQL (PostgreSQL, BigQuery), REST APIs, data pipelines, system design,

**Infrastructure & Delivery:** Flask, Docker, AWS/GCP, CI/CD (GitHub Actions), testing, deployment

**Design & Strategy:** Service design, stakeholder facilitation, workshop design, knowledge transfer, journey mapping, cross-functional collaboration

## RELEVANT EXPERIENCE

**Service Design Intern, Equinix (Global Operations and Design)** *May 2026 – Present*

- Translated a complex AI assisted artifact automation system into accessible workflows and documentation for service design stakeholders, enabling adoption across the EXD team
- Designed and delivered presentations to cross-functional teams, communicating technical requirements for API integrations, structured data imports, and workflow automation initiatives
- Identified governance, onboarding, and adoption gaps within AI operational workflows, developing scalable knowledge-transfer frameworks and reusable enablement resources
- Built prompt libraries, schema templates, and operational playbooks that enabled non-technical users to independently execute AI-supported workflows without engineering support
- Conducted stakeholder interviews and workflow analysis across design teams to identify friction points, map service dependencies, and inform AI-enabled process improvements

**Operations & AI Intern, Lyrata (DarMoD with Vector Institute)** *July 2025 – Present*

- Built AI operational systems that transformed unstructured SOPs and workflows into structured, queryable knowledge systems used in real organizational processes
- Applied Vector Institute's DaRMoD framework to assess data readiness, workflow dependencies, and governance gaps, translating operations into deployable AI-enabled systems
- Designed internal knowledge systems that reduced information retrieval friction and improved how operational teams accessed, interpreted, and acted on critical process documentation
- Collaborated with technical and non-technical stakeholders to improve AI adoption, documentation clarity, and long-term maintainability of deployed systems
- Iteratively improved AI system behavior through structured feedback loops, prompt refinement, and output validation to improve reliability and usability in production settings

**Prompt & AI Engineer, Outlier** *Nov 2022 – Jul 2025*

- Designed and evaluated AI workflows at scale, developing validation systems and feedback loops to improve model reliability and output consistency
- Translated ambiguous product and operational requirements into structured AI workflows, defining evaluation criteria, system behaviors, and measurable success metrics
