Toronto, ON · (437) 220-1426 · mariumashraf.MA@gmail.com · [LinkedIn](#) · [Website](#) · [GitHub](#)

SUMMARY

Software Engineering student with experience across strategy, research, process analysis, AI-enabled solutions, and technical delivery. Skilled at breaking ambiguous problems into structured analyses, identifying patterns and root causes, and translating findings into actionable recommendations. Experienced communicating complex problems clearly and collaborating across business, design, and engineering stakeholders.

EXPERIENCE

Service Design Intern | Equinix — Experience Design Team, Toronto, ON

May 2026 – Aug 2026

- Led end-to-end discovery across 5 organizations, conducting 12 coded interviews with 20 developers and 3 cross-functional working sessions to identify user needs, workflow gaps, dependencies, and opportunities for improvement.
- Synthesized research into 7 strategic artifacts—including journey maps, current/future-state service blueprints, personas, stakeholder maps, and a North Star vision—translating complex findings into prioritized recommendations for design and engineering leadership.
- Facilitated 4 cross-functional ideation workshops to move teams from problem definition to solution concepts, evaluating trade-offs, dependencies, and feasibility while aligning stakeholders around prioritized opportunities.
- Presented research synthesis, benchmarking, and recommendations to senior design and engineering stakeholders, translating complex findings into clear decision points and informing future roadmap direction.
- Created an AI-assisted artifact-generation system in Copilot Studio as a repeatable team workflow, reducing manual creation time from hours to 10–20 minutes; built prompt libraries, schema templates, and operational playbooks that enabled independent adoption and reduced engineering support dependency.

Operations & AI Intern | Lyrata — DaRMoD with the Vector Institute, Toronto, ON

July 2025 – May 2026

- Mapped and analyzed end-to-end operational processes, translating complex workflows into clear flowcharts and process maps; presented findings and improvement opportunities to the CMO of Desjardins within two weeks of joining, rapidly translating an ambiguous business problem into decision-ready recommendations.
- Built a RAG-based SOP knowledge system using Python, PostgreSQL, and LangChain, reducing operational information lookup time by ~90% by transforming fragmented documentation into a queryable resource for non-technical staff.
- Applied the Vector Institute's DaRMoD framework to assess data readiness, workflow dependencies, and governance gaps, translating manual processes into deployable AI-enabled systems with defined maintenance and adoption requirements.
- Established testing and feedback workflows to identify system failures, validate outputs, and iteratively improve solution reliability based on failure patterns and user needs.

Prompt & AI Engineer | Outlier, Remote

Nov 2022 – July 2025

- Designed and evaluated AI workflows across complex task domains, translating ambiguous requirements into structured workflows with defined evaluation criteria, success metrics, and validation frameworks.
- Analyzed model failures and user feedback to identify root causes and iteratively refine prompts, workflows, and validation processes, improving output consistency and solution quality through structured testing.

PROJECTS

Financial Data Analytics Dashboard — Full-Stack Product

Built an interactive financial analytics product using MERN, TypeScript, and Material-UI, incorporating machine-learning-driven financial predictions, data grids, and dynamic visualizations to translate financial data into actionable insights.

CapsuleOS — AI Product

Built a full-stack AI application using FastAPI/Flask, RAG, ChromaDB, PostgreSQL, Docker, and GCP CI/CD, translating user inputs into personalized recommendations through an end-to-end technical workflow.

SKILLS

Product & Strategy: Problem solving, requirements analysis, process analysis, root-cause analysis, opportunity analysis, strategic recommendations, prioritization, stakeholder management, Agile

AI, Data & Technology: Python, SQL, Java, REST APIs, Generative AI, OpenAI, LangChain, RAG, PostgreSQL, BigQuery, data pipelines, system design, Flask, Docker, AWS/GCP, GitHub Actions, testing

Research & Communication: User research, qualitative synthesis, benchmarking, journey mapping, service blueprinting, data storytelling, workshop facilitation, cross-functional collaboration

Tools: Excel, PowerPoint, Word

EDUCATION

B.Eng., Computer Eng (Major: Software Eng) Toronto Metropolitan University

Graduating April 2027

Relevant Coursework: Software Requirements Analysis & Specification, Software Project Management, Database Management Systems, Object-Oriented Analysis & Design, Software Design & Architecture, Advanced Algorithms
